UNFOLDING

Design by Studio*latte*

This year at Stockholm Design Week 2024 Slalom presents ***Unfolding***, the project signed by Studiolatte that celebrates the love of materials and unveils a preview of the year's 100% ethical novelties.

Like an open book, the space narrates the company's commitment to comfort and sustainability through bio-based finishes: here, in fact, are exclusively presented for the first time ***Woody*** and ***Bloom***, two new natural coverings for Slalom acoustic products.

Woody comes from the innovative patent pending technology that thermoforms FSC wood and recycled plastic fibres.
No substructures are needed to create high-performance spaces with a sober and contemporary look.

"We are now entering a new world, which retains all the positive and green aspects of our collections while changing face. Being able to design acoustics with a wood finish allows us to embrace new and different spaces, taking soundproofing beyond new boundaries." Says Elettra de Pellegrin, architect and CEO of Slalom.

Daughter of the same technology is the collection with ***Bloom*** finish, a blend of natural fibres and flower petals whose key words are "local fast regrowing natural".

Ranging from felt and fabric to wood, a cosy space emerges, a path unfolding in three rooms with soft, harmonious colours.

Through the enveloping space, the values of circularity and recyclability are expressed, pivotal to Slalom's mission towards eco-design and the reduction of environmental impact.

WOODY

An absolute novelty for Slalom, but especially in the field of acoustics: the fusion of PET fibres with the wood veneer guarantees a solid but lightweight product that is very easy to install, just a few strips of velcro.
And this is how the possibility of reuse and second life, typical of Slalom finishes, is guaranteed.

For the Stockholm Furniture Fair, he dressed our best-selling Millerighe moulding, giving it a completely new look and adding elegance and warmth with its cosy shade.

BLOOM

The blend comes from selected soils that are cultivated to maintain the biodiversity of an ecological corridor, following the seasonality of crops and the rules of climate neutral production.
Treated at high temperatures, the flowers retain their fragrance while losing their allergen.

Another of our flagship products, the ECOwall lends itself perfectly to its new finish.

ECOrange WAVE

A new entry in the thermo-bonded Slalom family.
Its seemingly random waves evoke an elegant drape with a modern design that gives the room a comfortable atmosphere.

At Stockholm presented in PETfabric finish in Sage shade.

Slalom

Design . Sustainability . Comfort

Slalom Acoustic & partition systems is a young Italian company producing sound-absorbing products, able to guarantee a safe acoustic comfort together with a unique design.
The peculiar characteristic of Slalom is the sustainable approach to the project, from the choice of raw materials, recycled and recyclable, to the production and management process with reduced environmental impact.
The passion for design and quality has given life to a range of dynamic and lively tailor-made products that arise from the concept of acoustethics, the synergy between acoustics, ethics and aesthetics, favoring the creation of comfortable spaces.
The wide selection of proposed materials and attention to detail comes to life from the careful choice of quality raw materials, traceable and with a high recycled content, part of a circular design that constantly invests in functionality, durability and recycling.
Each fabric, felt and color are chosen in such a way as to communicate an attitude and an emotion such as to stimulate all the senses, creating instense athmospheres.
